

Bisection Method:

1. $f(x) = x - \cos(x)$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point-3,

Newton-Raphson-4,

Secant-5

1

Enter your function

$x - \cos(x)$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:\n

Enter the percentage relative error allowed in solution

0.01

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000000000015

Enter allowed maximum number of iterations

50

Output:

Root is 0.739075

Iterations stopped as relative error stopping criteria was met

2. $f(x) = \exp(-x) - x$

Input:

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point-3,

Newton-Raphson-4,

Secant-5

1

Enter your function

$\exp(-x) - x$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:\n

Enter the percentage relative error allowed in solution

0.05

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000000025

Enter allowed maximum number of iterations

50

Output:

Root is 0.567139

Iterations stopped as relative error stopping criteria was met

Fixed Point Method:

1. $F(x) = x - \cos(x)$

Input:

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

3

Enter the function

$x - \cos(x)$

Enter your function $g(x)$ such that your function $f(x)$ is expressed as $x = g(x)$

$\cos(x)$

Enter starting point

0.5

Now subsequent enter stopping criteria:\n

Enter the relative error allowed in solution

0.01

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000025

Enter allowed maximum number of iterations

50

Output:

Root is = 0.739109

Iterations stopped as relative error stopping criteria was met

Undefined function or variable 'promptans1'.

2. $F(x) = \exp(-x) - x$

Input:

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

3

Enter the function

$\exp(-x) - x$

Enter your function $g(x)$ such that your function $f(x)$ is expressed as $x=g(x)$

$\exp(-x)$

Enter starting point

0

Now subsequent enter stopping criteria:\n

Enter the relative error allowed in solution

0.05

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.00000000000025

Enter allowed maximum number of iterations

50

Output:

Root is = 0.567068

Iterations stopped as relative error stopping criteria was met

Newton Raphson Method:

1. $F(x) = x - \cos(x)$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

4

Enter your function $f(x)$

$x - \cos(x)$

Enter first derivative of function $f(x)$

$1 + \sin(x)$

Enter starting point

0

Now subsequent enter stopping criteria:

Enter the relative error allowed in solution

0.01

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000025

Enter allowed maximum number of iterations

50

Output:

Root is 0.739085

Iterations stopped as relative error stopping criteria was met

2. $F(x) = \exp(-x) - x$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

4

Enter your function $f(x)$

$\exp(-x) - x$

Enter first derivative of function $f(x)$

$-1 * \exp(-1) - 1$

Enter starting point

0.2

Now subsequent enter stopping criteria:

Enter the relative error allowed in solution

0.05

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000025

Enter allowed maximum number of iterations

50

Output:

Root is 0.567178

Iterations stopped as relative error stopping criteria was met

False Position Method:

1. $F(x) = x - \cos(x)$

Input:

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point-3,

Newton-Raphson-4,

Secant-5

2

Enter your function

$x - \cos(x)$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:

Enter the relative error allowed in solution

0.01

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000000025

Enter allowed maximum number of iterations

50

Output:

answer = 0.739085

Iterations stopped as function value was close to zero as required

Undefined function or variable 'promptans1'.

2. $F(x) = \exp(-x) - x$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point-3,

Newton-Raphson-4,

Secant-5

2

Enter your function

$\exp(-x) - x$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:

Enter the relative error allowed in solution

0.05

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000000025

Enter allowed maximum number of iterations

50

Output:

answer = 0.567139

Iterations stopped as relative error stopping criteria was met

Secant:

1. $F(x) = x - \cos(x)$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

5

Enter your function

$x - \cos(x)$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:\n

Enter the relative error allowed in solution

0.01

Enter absolute value of Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000025

Enter allowed maximum number of iterations

50

Output:

Root is 0.739085

Iterations stopped as relative error stopping criteria was met.

2. $F(x) = \exp(-x) - x$

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

N

Choose the method of solution by selecting number shown with method:

Bisection-1,

False Position-2,

Fixed Point Method-3,

Newton-Raphson-4,

Secant-5

5

Enter your function

$\exp(-x) - x$

Enter first starting point

0

Enter second starting point

1

Now subsequent enter stopping criteria:\n

Enter the relative error allowed in solution

0.01

Enter absolute value of Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.000000000025

Enter allowed maximum number of iterations

50

Output:

Root is 0.567143

Iterations stopped as relative error stopping criteria was met

Muller Method:

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

Y

Choose One of the following methods: Muller-1, Bairstow-2

1

Input Degree of Polynomial

4

Enter all degree+1 number of coefficients with each input followed by space

1 -7.4 20.44 -24.184 9.6448

Enter first starting point

-1

Enter 2nd starting point

0

Enter third starting point

1

Now subsequent enter stopping criteria:

Enter the relative error allowed in solution

0.01

Enter Convergence criteria for the function value, i.e., how close $f(x)$ is to zero

0.0000000000025

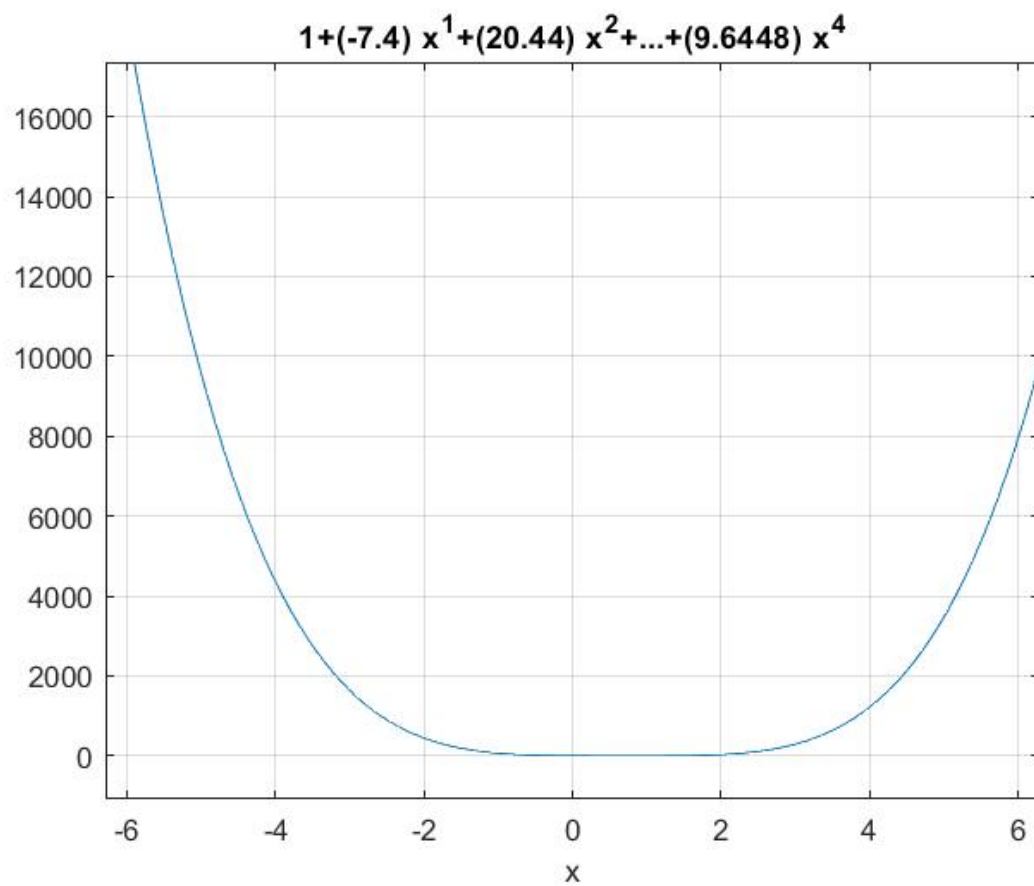

Enter allowed maximum number of iterations

50

Output:

Root is 0.481042+0.000000i

Iterations stopped as relative error stopping criteria was met

Bairstow Method:

1. (r=4,s=-5)

Input:

Is the input equation a polynomial?(Y/N)

Y

Choose One of the following methods: Muller-1, Bairstow-2

2

Input your polynomial: $x^4 - 7.4x^3 + 20.44x^2 - 24.184x + 9.6448$

Starting value of r: 4

Starting value of s: -5

Allowed Value of relative error: 0.01

Allowed maximum iteration: 50

Output:

The two roots of the functions are: $2.200000 + 1.280000i$, $2.200000 - 1.280000i$

The two roots of the functions are: 2.199918, 0.800061

2. ($r=2, s=-2$)

Input:

>> Ass1

Is the input equation a polynomial?(Y/N)

Y

Choose One of the following methods: Muller-1, Bairstow-2

2

Input your polynomial: $x^4 - 7.4x^3 + 20.44x^2 - 24.184x + 9.6448$

Starting value of r: 2

Starting value of s: -2

Allowed Value of relative error: 0.01

Allowed maximum iteration: 50

Output:

Roots of the functions are: 2.200000, 0.800000

Roots of the function are: $2.200000 + 0.800000i$, $2.200000 - 0.800000i$
